

# NOTES 6.1: Perpendicular and Angle Bisectors

Objective: \_\_\_\_\_

## Equidistant:

THEOREM	DIAGRAM
<p style="text-align: center;"><b>PERPENDICULAR BISECTOR THEOREM</b></p> <p>In a plane, if a point lies on the perpendicular bisector of a segment, then it is equidistant from the endpoints of the segment.</p>	 <p>If <math>\overleftrightarrow{CP}</math> is the <math>\perp</math> bisector of <math>\overline{AB}</math>, then _____.</p>
<p style="text-align: center;"><b>CONVERSE OF THE PERPENDICULAR BISECTOR THEOREM</b></p> <p>In a plane, if a point is equidistant from the endpoints of a segment, then it lies on the perpendicular bisector of the segment.</p>	 <p>If <math>DA = DB</math> then point D lies on the <math>\perp</math> bisector of _____.</p>

### Example 1:

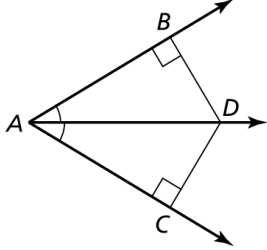

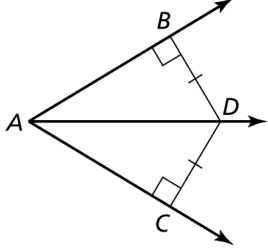

Find AB and explain your reasoning.

### Example 2:

Find SU and explain your reasoning.

THEOREM	DIAGRAM
<p style="text-align: center;"><b>ANGLE BISECTOR THEOREM</b></p> <p>If a point lies on the bisector of an angle, then it is equidistant from the two sides of the angle.</p>	 <p>If <math>\overrightarrow{AD}</math> bisects <math>\angle BAC</math> and <math>\overline{DB} \perp \overline{AB}</math> and <math>\overline{DC} \perp \overline{AC}</math>, then _____.</p>
<p style="text-align: center;"><b>CONVERSE OF THE ANGLE BISECTOR THEOREM</b></p> <p>If a point is in the interior of an angle and is equidistant from the two sides of the angle, then it lies on the bisector of the angle.</p>	 <p>If <math>\overline{DB} \perp \overline{AB}</math> and <math>\overline{DC} \perp \overline{AC}</math> and <math>DB = DC</math>, then <math>\overrightarrow{AD}</math> bisects _____.</p>

**Example 3:**

Find  $m\angle CAB$  and explain your reasoning.

**Example 4:**

Find BD and explain your reasoning.
