

Ch 12: Transformations

REFLECTIONS

EXAMPLE 1 Reflect $\triangle ABC$ across the x-axis and name the coordinates.

$$A(-3, 4) \rightarrow A'(-3, -4)$$

$$B(4, 2) \rightarrow B'(4, -2)$$

$$C(-1, -4) \rightarrow C'(-1, 4)$$

Do you see a pattern?

$$(x, y) \rightarrow (x, -y)$$

EXAMPLE 4 Draw the line(s) of symmetry, if any, for the following figures.

EXAMPLE 2 Reflect $\triangle RST$ across the line $y = x$ and name the coordinates.

$$R(-4, 6) \rightarrow R'(6, -4)$$

$$S(-1, 2) \rightarrow S'(2, -1)$$

$$T(-6, -1) \rightarrow T'(-1, -6)$$

Do you see a pattern?

$$(x, y) \rightarrow (y, x)$$

TRANSLATIONS

EXAMPLE 5 Translate the figure left 6 and up 8. Give the coordinates of the new points.

$$A'(-4, 5)$$

$$B'(-4, 0)$$

$$C'(2, 0)$$

$$D'(2, 5)$$

$$E'(-1, 3)$$

LINES OF SYMMETRY

EXAMPLE 3 What, if any, were the lines of symmetry in EXAMPLES 1 & 2?

- a) EXAMPLE 1- **x-axis**
- b) EXAMPLE 2- **y = x**

ROTATIONS

Two types:

Clockwise
Determined by degrees:

- 90°: $\frac{1}{4}$ turn (same as 270° in opposite direction)
- 180°: $\frac{1}{2}$ turn (same in both directions)
- 270°: $\frac{3}{4}$ turn (same as 90° in opposite direction)
- 360°: 1 turn (back to where you began)

Counter-clockwise

EXAMPLE 6 Describe each rotation.

a) $A \rightarrow A'$ **90° Clockwise**

b) $P \rightarrow P'$ **270° Clockwise**

c) \rightarrow **180°**

90° Counter-clockwise **90° Counter-clockwise**

EXAMPLE 7 Draw the resulting triangles when the triangle is rotated 90°, 180°, and 270° clockwise.

90° Clockwise
(270° Counter-clockwise)
 $(x, y) \rightarrow (y, -x)$

270° Clockwise
(90° Counter-clockwise)
 $(x, y) \rightarrow (-y, x)$

180°
 $(x, y) \rightarrow (-x, -y)$

A(-4, 2)
B(-7, 7)
C(-3, 9)

DILATIONS WITH SLOPE

EXAMPLE 8 Use the graph below to find the following slopes.

- a) slope of line a: $\frac{3}{2}$
- b) slope of line b: $-\frac{1}{3}$
- c) slope of line c: **Und**
- d) slope of line d: **0**

Slope can be useful in dilating images.

EXAMPLE 9

Use "slope" to produce a dilation of $\triangle ABC$ with a scale factor of 2. Use "B" as your center.

$A'(-7, 1)$
 $C'(5, -1)$

EXAMPLE 10

Use "slope" to produce a dilation of $\triangle XYZ$ with a scale factor of $\frac{1}{2}$. Use X as your center.

$Y'(4, 3)$
 $Z'(7, 4)$
